# Adhiparasakthi Hospitals

Melmaruvathur, Tamil Nadu · Electronic Medical Records System

REST API SPECIFICATION
Endpoint: `/api/reports`
Version 1.0 · November 2026

**Universal Report Fetch API:** Retrieves patient **Laboratory Investigation Charts** and **Discharge Summaries** as PDFs or ZIP archives using UHID or IP Number. Operates without session login requirements (publicly accessible across CORS from any web, mobile, or hospital HIS client).

## 1. API Endpoints Summary

| Method | Path | Description |
|---|---|---|
| GET POST | `/api/reports` | Query patient reports metadata, direct download links, or full base64 PDF payloads. |
| GET | `/api/reports/download` | Direct file streaming endpoint ( `type=lab` , `type=summary` , or `type=zip` ). |
| GET | `/api/reports/status` | Service health and automated background discharge check scheduler status. |

## 2. Request Parameters

| Parameter | Type | Required | Details & Usage |
|---|---|---|---|
| `uhid` / `regNo` | String | Conditional* | Patient Registration Number / UHID (e.g. `6213746` ). Resolves patient stay and documents. |
| `ipnumber` / `ipNo` | String | Conditional* | Inpatient Admission Number (e.g. `IP07034897` ). Direct stay identifier. |
| `lab` | Boolean | Optional | Include Lab Investigation PDF ( `true` / `false` ). Defaults to `true` . |
| `summary` | Boolean | Optional | Include Discharge Summary PDF ( `true` / `false` ). Defaults to `true` . |
| `fromDate` / `from` | String | Optional | Stay date window start ( `YYYY-MM-DD` or `DD-MM-YYYY` ). Disambiguates multiple stays. |
| `toDate` / `to` | String | Optional | Stay date window end ( `YYYY-MM-DD` or `DD-MM-YYYY` ). |
| `download` / `direct` | Boolean | Optional | If `true` , directly streams binary file (PDF if single, ZIP if both) instead of JSON. |
| `format` | String | Optional | Explicit response format: `json` (default), `pdf` , or `zip` . |
| `base64` | Boolean | Optional | If `true` , embeds complete base64-encoded PDF strings inside the JSON response. |

* At least one of `uhid` or `ipnumber` must be supplied.

## 3. Behavior Matrix

| Request Flags | JSON Mode (Default) | Direct Download ( `download=true` ) |
|---|---|---|
| **Both True** `lab=true&summary=true` | Returns URLs for Lab PDF, Summary PDF, and combined ZIP download link. | Streams combined **ZIP archive** containing both PDFs ( `Reports-<IP>.zip` ). |
| **Lab Only** `lab=true&summary=false` | Returns Lab report status, filename, and direct download URL. | Streams **Lab PDF** directly ( `Lab-Report-<IP>.pdf` ). |

| Request Flags | JSON Mode (Default) | Direct Download (`download=true`) |
| --- | --- | --- |
| **Summary Only**<br>`lab=false&summary=true` | Returns Summary report status, filename, and direct download URL. | Streams **Discharge Summary PDF** directly (`Discharge-Summary-<IP>.pdf`). |

## 4. JSON Response Specification

```
{
  "ok": true,
  "patient": {
    "uhid": "6213746",
    "ipNo": "IP07034897",
    "name": "Mrs.SAGUNTHALA",
    "gender": "FEMALE",
    "age": "60 Y",
    "admissionDate": "09-11-2026 01:22",
    "dischargeDate": "10-11-2026 05:48",
    "date": "2026-11-10",
    "doctor": "SWETHA",
    "department": "GENERAL SURGERY",
    "ward": "FEMALE SURGICAL WARD",
    "bedNo": "229"
  },
  "reports": {
    "lab": {
      "requested": true,
      "available": true,
      "name": "Lab-Report-IP07034897.pdf",
      "mimeType": "application/pdf",
      "downloadUrl": "http://emr-host:2003/api/reports/download?type=lab&ipnumber=IP07034897&date=2026-11-
10"
    },
    "summary": {
      "requested": true,
      "available": true,
      "name": "Discharge-Summary-IP07034897.pdf",
      "mimeType": "application/pdf",
      "downloadUrl": "http://emr-host:2003/api/reports/download?type=summary&ipnumber=IP07034897&date=2026
-11-10"
    },
    "zip": {
      "available": true,
      "name": "Reports-IP07034897.zip",
      "mimeType": "application/zip",
      "downloadUrl": "http://emr-host:2003/api/reports/download?type=zip&ipnumber=IP07034897&date=2026-11-
10"
    }
  },
  "downloadAllUrl": "http://emr-host:2003/api/reports/download?type=zip&ipnumber=IP07034897&date=2026-11-1
0"
}
```

## 5. Integration Examples

### A. cURL (Command Line)

```
# 1. Fetch JSON with download URLs by UHID:
curl "http://localhost:2003/api/reports?uhid=6213746&lab=true&summary=true"

# 2. Directly download ZIP containing both PDFs:
curl -OJ "http://localhost:2003/api/reports?uhid=6213746&lab=true&summary=true&download=true"

# 3. Directly download Lab PDF only:
curl -OJ "http://localhost:2003/api/reports?ipnumber=IP07034897&lab=true&summary=false&download=true"

# 4. POST request with Base64 included:
curl -X POST "http://localhost:2003/api/reports" \
  -H "Content-Type: application/json" \
  -d '{"uhid": "6213746", "lab": true, "summary": true, "base64": true}'
```

### B. JavaScript / Fetch Client

```
// Fetch reports programmatically via JavaScript fetch
const res = await fetch("http://localhost:2003/api/reports?uhid=6213746");
const data = await res.json();
if (data.ok) {
  console.log("Patient:", data.patient.name, "Stay:", data.patient.ipNo);
  if (data.reports.lab?.available) window.open(data.reports.lab.downloadUrl);
  if (data.reports.summary?.available) window.open(data.reports.summary.downloadUrl);
}
```
